### **VERSAR, INC. ANNOUNCES NEW LEADERSHIP APPOINTMENTS**

**Springfield, VA – June 11, 2019** – Versar, Inc. (“Versar”) announced today that Daniel Patton has joined the company as Senior Vice President and General Manager for Military Programs and the Program and Construction Management business segments. Mr. Patton retired from the United States Army Reserve in 2013. During his tenure as a Colonel in the United States Army Corps of Engineers Mr. Patton led numerous civilian and military programs around the world, including program integration for the Reconstruction of Iraq, strategic planning for the 2005 Base Realignment and Closure (“BRAC”) process, response and recovery operations for the Joplin tornado, and program delivery for the Homeland Security Infrastructure Program. In addition to Mr. Patton’s appointment, Suzanne Bates, previously the Senior Vice President and General Manager of Versar’s Environmental Services business segment, will now assume the additional responsibility of managing Versar’s Security Systems business segment.

Dwane Stone, Versar’s Chief Executive Officer, said “Versar has a highly talented group of leaders, and today’s appointments streamline our focus on key markets as we continue to grow, drive productivity and enhance service levels, which is a process that began eighteen months ago when the company was taken private. I have great confidence in our leadership team as we take on new challenges and continue our successes in providing greater value to our clients and business partners.” Mr. Stone, a 40+ year veteran of industrial contracting, continued by saying, “we’re incorporating some of the efficiencies from the broader Engineering & Construction industry to benefit our government clients and this leadership team has the enthusiasm and experience necessary to drive that additional value creation”.

**VERSAR, INC.**, headquartered in Springfield, Virginia, is a privately-held, globally positioned project management company providing sustainable and value-oriented solutions to government and commercial clients in the program & construction management, environmental services, professional services, and security systems market areas.
